

ANCHORED CONSTRUCTION

CAPABILITIES STATEMENT

LLC

CORPORATE OVERVIEW

Anchored Construction operates as an institutional-grade prime contractor specializing in complex civil earthwork, heavy industrial facilities, and self-sustaining off-grid utility infrastructure. By design, we maintain absolute legal and financial isolation from parent holdings and residential asset frameworks. This strict structural isolation provides an ironclad risk management profile that satisfies top-tier surety bonding underwriters, commercial developers, and government procurement offices.

CORE TECHNICAL COMPETENCIES

- **Heavy Civil Engineering & Earthwork:** Mass excavation, balanced cut-and-fill operations, subgrade soil stabilization, civil drainage retention basins, and heavy logistics transport corridors.
- **Industrial & Specialized Facility Construction:** Structural concrete mats, deep-pile foundations, rigid structural steel superstructures, and specialized vocational/trade environments equipped with high-amperage utility drops and industrial ventilation.
- **Off-Grid Utility & Microgrid Infrastructure:** Utility-scale solar ground-mount racking installations, centralized inverter pads, thermal-isolated battery energy storage system (BESS) pads, and long-run subsurface utility trenching/boring.

PRIMARY NAICS CLASSIFICATIONS

236220	Commercial and Institutional Building Construction	PRIMARY
237130	Power and Communication Line and Related Structures Construction	SECONDARY
237310	Highway, Street, and Bridge Construction	SECONDARY
237990	Other Heavy and Civil Engineering Construction	SECONDARY

QUALITY ASSURANCE & RISK CONTROL

- **Regulatory Compliance:** Full adherence to OSHA standards, local municipal building codes, and environmental protections.
- **Dual-Envelope Review:** All engineering calculations, civil site maps, and structural layouts undergo mandatory dual evaluation by our in-house engineering team and external certified engineering professionals prior to execution.
- **Operational Insulation:** No trust assets, parent capital reserves, or adjacent residential components are tied to the financial, bonding, or operational risks of Anchored Construction.
